SynExi and Network General Launch Comprehensive IPv6 Training Program

Establish partnership to provide government and industry clients with critical training series necessary to support their IPv6 transition efforts

Fairfax, VA., October 11, 2007 – SynExi, LLC., a recognized leader in Internet technologies and Internet Protocol version 6 (IPv6), announced a partnership with Network General Corporation™, the leading provider of IT Service Assurance solutions, to provide government and commercial clients with a comprehensive suite of training classes to support their IPv6 transition efforts. The training classes will be offered through Network General's Sniffer University Education Division and available beginning this month.

Dr. Chuck Lynch and Dale Geesey, co-founders and Senior Partners of SynExi, have been two of the industry's most prolific advocates, writers and trainers on technology transition with a special emphasis on IPv6. They have trained hundreds of people on IPv6 through seminars, workshops and classes and are frequent speakers at conferences.

"Our joint training program is designed to provide agencies and commercial organizations with the critical information they need now to plan and implement a successful transition to IPv6," said Geesey. "Our focus is not just on providing technical details on IPv6, but passing on our experiences and lessons learned to help the students really understand what they will be facing throughout an extended IPv6 transition process."

Initial training dates and locations include:

Introduction to IPv6 (2 days)

- Washington, DC: October 15th & December 10th
- Dallas, TX: November 26th

Advanced IPv6 Concepts (3 days)

- Washington, DC: October 17th & December 13th
- Dallas, TX: November 28th

A complete class schedule and future training dates can be found on Network General's website at <http://www.networkgeneral.com/SnifferUniversity.aspx>.

"The Sniffer University Education Division provides one of the best training programs in the industry," said Lynch. "We are excited to help Network General expand their scope to IPv6. This will be a real value-add to their customers."

About SynExi

Fairfax, VA-based SynExi is a partnership between leading technology experts to provide strategic-level consulting to meet the challenges associated with technology transition. We focus on the identification, development, and the adoption of new technologies to usher in next generation capabilities to meet the ever changing mission and requirements of commercial, governmental and international organizations.
